FARM WAGE RATES AT RECORD LEVEL
EMPLOYMENT UP SLIGHTLY

Farm wage rates had advanced to record levels on October 1 in practically all regions of the country, the Bureau of Agricultural Economics reported today. The number of persons employed on the Nation's farms was about two percent greater than a year ago, with most of the increase occurring in the number of hired workers.

Farm wage rates on October 1 were about 7 percent higher than a year ago and a little over 4 times the 1910-14 average. With the exception of some rates in the South Atlantic and Pacific States, all types of wage rates reached peak all-time levels. Per day rates with and without board advanced in all regions, with the greatest advances in the West North Central States. Here, day rates have soared to nearly 12 percent over the previous high last October. While rates of pay advanced from July 1 to October 1 in practically all regions, a much greater percentage of the hired laborers were employed in the South where the prevailing wages are considerably lower than in other parts of the country. Because of this shift some of the national average rates showed slight declines from July of this year.

Some of the increases in wage rates throughout the Nation were due to the seasonal demand for harvest labor. In addition, farm wage rate rises are partially the result of the increases in farm commodity prices and of the tendency of farm wages to follow industrial wage increases. The sharpest wage increases were in day rates reported from the Dakotas, Nebraska and Minnesota.

About 11,700,000 people were working on farms on October 1 of this year. There were only slightly more family workers than a year ago. Hired hands however, were considerably more numerous on farms than at this time last year. Important increases in the number of hired workers were shown in the South where corn and rice harvests, picking the larger cotton crop and peanut digging were in full swing. The West North Central States likewise reported considerably more hired hands working on farms this year. Changes were minor in other regions. There were 6 percent fewer hired workers in the Middle Atlantic States where killing frosts put an early end to most of the tender vegetable crops.

Seasonally, total farm employment rose 5 percent during September, about the same increase as usual. Increases in the southern regions ranged from 6 to 25 percent while the number of workers in all other sections of the country declined somewhat from the September 1 level. A greatly increased number of family workers in the South more than offset decreases elsewhere. The number

of hired workers likewise, rose seasonally in the South, but declines since September 1 in other regions varied from 6 percent in New England to 21 percent in the West North Central States.

Weather during the last week in September was mostly fair, but colder than usual east of the Rockies. Some freeze damage was reported from the northern border States and a few adjacent areas. Rains along the Atlantic coast northward to Virginia hindered farm activity somewhat in the South Atlantic States. Elsewhere, however, major harvesting operations were favored by the dry weather which hastened maturity of corn, soybeans and other ripening crops. Soil preparation and seeding of small grains made good progress except in the important Great Plains wheat areas of western Kansas and Oklahoma, northwestern Texas and sections of South Dakota. Due to the dryness of topsoil, many farmers in these States were awaiting rain before planting wheat. Cotton picking was nearly finished in the coastal areas on October 1 and good progress was being made in the northern portion of the belt. The cool, dry weather over most of the country also was especially favorable for such harvest operations as apple picking and the digging of potatoes, peanuts and sugar beets.

By October 1 in New England only 25 percent of the important Maine potato crop was harvested but apple picking was in full swing and after somewhat delayed ripening the cranberry harvest was underway. Most field crops were already in barns or silos. The number of family workers employed was the same as last year but there were 3 percent more hired workers. As usual, the number of family and hired workers were each down seasonally from September 1.

In the Middle Atlantic States the number of persons at work on farms was two percent lower than last year. Declines of both family and hired workers were slightly greater than usual for this time of year. Considerable damage to vegetable crops was caused by heavy frosts the last week of September. In New York silo filling was a rush job as was the cranberry harvest in New Jersey. Corn husking, apple picking, seeding small grains and cover crops were jobs common to the three-State area. Much of the migratory labor had already left the area by October 1.

There was very little change in the number of farm workers employed in the East North Central States in comparison with this time last year. The number of hired workers declined 9 percent since September 1 but family workers dropped only slightly during the same period. Fall seeding of winter grains was making good progress throughout the region. Much of the late corn was being rushed into silos around October 1. Corn picking and combining soybeans were just getting started in Indiana and Illinois. Sugarbeet harvest had started in Michigan and Wisconsin and the fall apples and late hay crops were being gathered everywhere.

Varied progress was being made with farm work in the West North Central States. Of most concern was the slow progress of wheat seeding in western Kansas and parts of Nebraska, Iowa and South Dakota where top soil moisture was insufficient for germination. Nearly all grain harvest was completed in the area, except flax combining and some shock threshing in North Dakota. Potato digging and beet lifting were creating quite a demand for labor in North Dakota, Nebraska and Minnesota. Corn and soybean harvests were underway in Missouri, eastern Kansas and parts of Iowa. About 21 percent more hired workers were employed this year while only slightly more family members were at work than a year earlier. The decline in number of workers during September was about as usual.

Heavy rainfall during the last week of September delayed farm work somewhat in the South Atlantic States. Planting of fall crops has been delayed in Florida

.....
and some damage to cotton, late hay and truck crops was reported from other coastal sections. The number of hired workers increased less than usual during September and on October 1 was slightly below a year earlier. There was about a normal September increase in the number of family workers. Cotton picking was well advanced in Georgia and the Carolinas, and peanut digging was proceeding rapidly in the region. Apple harvest was making progress in the Virginias and Maryland while many general farmers were busy cutting or husking corn and seeding land to winter grain.

In the East South Central States excellent harvest weather prevailed around October 1. Hired and family labor increased somewhat more than usual to handle the heavy work load. Cotton picking made good progress in Alabama, Mississippi and Tennessee. In Kentucky the principal work was cutting and housing tobacco. Digging and threshing peanuts and the digging of sweet potatoes were important activities in the southern end of the region. Late hays were being cut and the seeding of winter grains and cover crops was underway over most of the area.

Around the 1st of October farmers in the West South Central States also were very busy with harvest work. Total employment rose seasonally to 25 percent above the number working on September 1. In comparison with last year hired labor increased 14 percent but there was only a slight rise in the number of family workers. Picking or snapping cotton was in full swing throughout the region. Rice was being combined in Louisiana; Arkansas and eastern Texas. Other jobs were husking corn, harvesting grain sorghums and digging peanuts. Slow progress was being made, however, in seeding small grains due to drought conditions in western Oklahoma and the high plains of northwestern Texas. The planting of winter vegetables in south Texas was proceeding normally.

Farm employment declined less than usual for September in the Mountain States and on October 1 there were 9 percent more people working on farms than at the same time last year. The biggest jobs confronting farmers in this region were the commercial potato harvest in Idaho and sugar beet harvest in Idaho, Montana, Wyoming and Colorado. Farmers are gravely concerned with the supply of labor in most beet-growing areas. Some schools and entire towns in Idaho already have declared holidays to help with the harvest. The beets are earlier than usual in Idaho, and potatoes, beets, and such row crops as lettuce, onions, corn and seed crops are all being harvested at about the same time. Good weather has favored cotton picking and dry bean harvest in Arizona and New Mexico. The 1st of October was a peak period in most of the Mountain States for rounding up cattle as well as marketing sheep. There has been a general movement of livestock to winter ranges.

Hired employment on October 1 in the Pacific States was 8 percent above last year but the number of family members at work was slightly smaller. The decline in total employment since last month was also less than usual due to the rapid ripening of crops following above normal temperatures in September. Picking of Delicious and Winesap apples was well underway in Washington and the Hood River Valley of Oregon. Filbert and cranberry harvest was also in full swing in Washington. Fall seeding of wheat under ideal moisture conditions was proceeding earlier than usual in Oregon and the Big Bend and Palouse areas of eastern Washington. In California hot dry weather hastened maturity of such crops as beans, rice, sugar beets, grain sorghums and alfalfa. Harvest activities requiring large numbers of workers in California included: citrus crops, all vegetables in many commercial areas, tomatoes for canning, grapes, walnuts and the wind-up of almond and fig harvest. Cotton picking is also now generally underway with a large number of workers involved.
